

PRESIDENT'S THOUGHTS

As I mentioned in our newsletter last June, the last few weeks have been spent preparing for the official launch of Evanesto®.

Our teams have been so mobilized that, despite the special conditions of this year 2020, I am proud to announce that the milestones set by our shareholders have just been reached, within the set deadlines.

The achievement of these milestones allows us to benefit today from a capital increase carried out by our historical shareholders for an amount of 7.3 million euros. Carbios and the SPI funds operated by Bpifrance thus confirm their confidence in the sustainability and growth of our business.

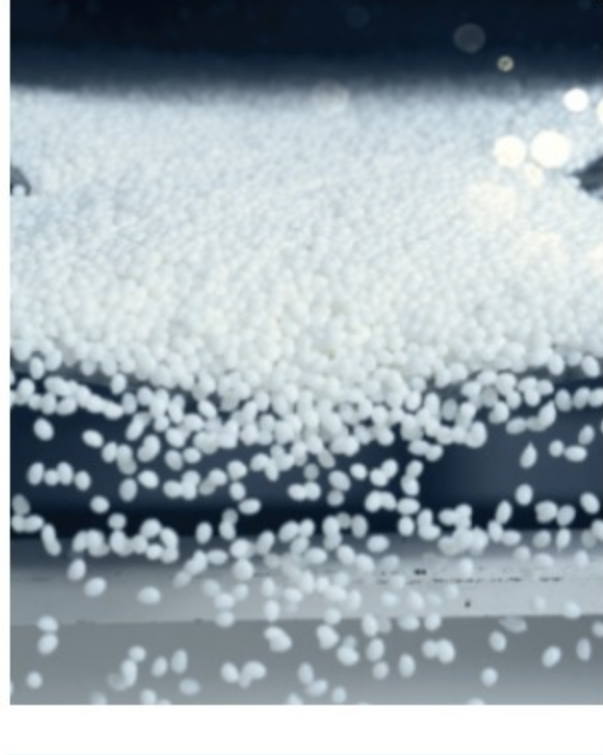

This is a real insurance factor for our company, its solution, and our ambitions! It also gives us the opportunity to make new investments in order to optimize our industrial line while strengthening our teams with new talents, a key factor in this new stage, the launch of Evanesto®.

Find our latest news through this newsletter!

DID YOU KNOW?

15 companies are in progress of tests with Evanesto® on their industrial lines. Positive results!

BUSINESS SUCCESS

Evanesto®: the first additive that allows plastics with a high PLA content to achieve the « OK compost HOME » certification of TÜV AUSTRIA Group

The close collaboration between TÜV AUSTRIA and Carbiolice will allow industrials and manufacturers of finished products to facilitate their own OK compost HOME certification process when their products (packaging films, salad bags, lids...) contain Evanesto®. The finished product containing Evanesto® can be certified if it is integrated at a minimum concentration of 5% into a film containing 33% PLA and a maximum thickness of 60 µm for monolayer films and 30 µm for multilayer films. Other formulations are currently under assessment!

WHAT'S TRENDY IN R&D?

Continue to innovate to open the field of possibilities covered with Evanesto®

A certification process for products with a thickness of 450 µm and a 70% PLA content has been launched with TÜV AUSTRIA Group. Evanesto® will then enable yogurt pots or trays for example to achieve « OK compost HOME » certification: a first for rigid applications with such a thickness! Work is also continuing on sheets and films containing up to 100% PLA.

ONGOING PRODUCTION

The implementation of new equipment, even safer and more efficient

Because Carbiolice is entering a new industrial phase, specific facilities have been set up. The development of the automation of our equipment will reduce the drudgery for our line operators but also ensure even greater safety, while improving the performance of our production line.

INSIDE CARBIOLICE

100% of our employees trained in 2020

Despite the epidemic situation of the last few months, we are proud to have achieved the training objectives we set at the beginning of the year. We remain mobilized on a daily basis to adapt our working conditions when the situation requires it, to ensure the protection of our teams, who are more motivated than ever! In order to support the commercialization of Evanesto®, we are recruiting 2 talents.
